PROFESSIONAL SUMMARY

Full Stack Engineer experienced in turning business requirements into production applications, including internal CRM systems and e-commerce platforms, using .NET, React, and SQL. My work includes APIs, internal tools, performance improvements, automated testing, and containerized deployments.

WORK EXPERIENCE

Printomi - A startup specializing in intelligent printing infrastructure and technology solutions.

Full Stack Engineer (Freelance) | Istanbul | November 2024 - Present

- Developed fault-tolerant REST APIs powering a mobile application used by students, remote workers, and shop owners.
- Deployed Dockerized services on Linux, maintained IIS-hosted applications on Windows, managed PostgreSQL in production, and integrated CUPS/IPP to automate print workflows.
- Built and maintained an internal CRM system for content and data operations.
- Implemented RabbitMQ-based message broker integration to ensure reliable printing across locations.
- Introduced CI workflows to run test suites on push and enforce code formatting on commit, improving development consistency and velocity.
- Designed and implemented unit and integration tests leveraging Testcontainers to run isolated, production-like test environments within containers.

Webbilir - A digital agency providing e-commerce and marketing solutions

Full Stack Engineer | Maslak, Istanbul | June 2023 - January 2026

- Implemented cross-stack performance optimizations, improving key Web Core Vitals (LCP, CLS, FID) by ~20-50% across performance-critical pages by introducing modern image formats (WebP, AVIF) and implementing efficient caching strategies for high-traffic backend queries.
- Built two internal CLIs that generated pages and services with preconfigured data wiring, cutting development time for simple pages by over 25%.
- Worked with Microsoft SQL Server and Entity Framework Core using a database-first approach for data access and schema management.
- Mentored junior developers through code reviews and firsthand debugging support to help them onboard.

OPEN SOURCE CONTRIBUTIONS

gpui-component - An open-source Rust UI component library built on GPUI.

Open Source Contributor | Apr 2026 - Present

- Authored 8 merged PRs spanning Tree-sitter syntax highlighting, Markdown rendering, native text selection, and reusable UI components.
- Improved code-block rendering performance with lazy computation and highlighter caching; added regression coverage for highlighting, selection, and UI stability issues.

TECHNICAL SKILLS

Languages: C#, Go, Rust, TypeScript

Backend: .NET, Gin, Chi, Fiber, Axum, Tokio

Frontend: React, Next.js, Svelte

Caching & State: FusionCache, Redis, Zustand, Redux, TanStack Query

Data Access: Entity Framework Core, Drizzle, sqlc

Databases: Microsoft SQL Server, PostgreSQL

Infrastructure: Docker, IIS, GitHub Actions, Testcontainers, CUPS

EDUCATION

Istanbul Bilgi University

Mechatronics Engineering

Istanbul
